

Abstract of the Disclosure

5 A server-client network system for genotyping analysis and a computer readable medium used therein are provided. The server-client network system includes a server storing databases required for genotyping analysis and providing the databases to a client and the client receiving the results of a test on the target sample using a biochip and performing a genotyping analysis on the target sample with reference to the databases provided from the server. The server-client network system improves the security of privacy information and guarantees the independency of analysis software.
